To Mark and Abe,
Please focus all your efforts on our unacceptable flooding issues of our historic area of downtown. After living in my home for 35 years with no problems except that last 3 years, why should I dig into the water table to put a sub pump to protect my home?
Why is the lake water height over the exit pipe?
Why are you not putting in larger capacity sewer and water drain pipes to remove our all ready exploding infrastructure?
This cannot wait. We cannot be running home every time it rains, that's like being held hostage by our municipal government.
Please inform me of when work will start in the corrections of our combined sewer water pipes. Make new pump stations or switch half the system away from downtown, anything to divert it away from downtown which we cannot empty itself.
I'm sure a qualified engineer would have solution's so that we can have our life and freedom back instead of worrying every rainy day for more floods.
I expect more than just more studies, I want roads opened up and bigger pipes installed plus diverting most of the sewer of the exterior of town towards the treatment centre and not downtown, NOW.
Sincerely upset and frustrated,
Denise Forand
